

Synaps® OM | Polyester engineered for offset, HP Indigo and UV inkjet printing.

Unstoppable.

Superior dry times using standard conventional inks make Synaps® OM the only choice for short-run, on demand printing.

Synaps® OM is the next generation of synthetic paper made from high-grade polyester. Polyester films have superior dimensional stability, unmatched lay-flat characteristics, and the look and feel of premium paper. The result: great looking printed applications that hold their shape and color without extra laminating, mounting or coatings. Synaps® OM is waterproof and resistant to grease, chemicals and other liquids, characteristics that make the product suitable for both indoor and outdoor applications. With Synaps® OM, you can say goodbye to bowing, curling, delaminating and fading, in any environment.

- + **Efficient** - Synaps® OM dries quickly without the need for special inks ... just like uncoated paper. No need to wait hours or days for the stock to dry, so you can quickly turn around projects for your customers.
- + **Compatible** - Printable with offset, HP Indigo and UV inkjet based printing platforms.
- + **Reliable** - Because of its polyester base, Synaps® OM will not distort or stretch during the printing process for superior registration on press. You can trust that Synaps® OM will run consistently each time you print.
- + **Strong** - Synaps® OM is waterproof, tear-proof and weather resistant to hold up in the toughest indoor and outdoor conditions.
- + **Versatile** - With high rigidity and flatness, Synaps® OM is suitable for a wide range of applications like point-of-purchase displays, durable signage, menus, maps and manuals.
